

Task:

In this Ticket, You will be designing a group of unfinished pages in a static / no-API “dehydrated” mode (The hydration tickets will be assigned later). Your task is to design the “Applications” page, as shown in the pictures below and [in Figma](#):

Please review and confirm the Ticket by replying to this email with confirmation or suggested modifications by 3pm on Monday 9/25 (Tomorrow).

Tools and resources:

- React, Next.JS
- JS, HTML, CSS
- Git frontend repo
- Any AI tool that might aid you
- [Figma Prototype](#) for visual reference

Expected time frame / Deadline:

- One Week: **Total of 3 hours of work.**
- This task Must be completed and returned by **Monday 10/2 11:59pm**

In case of any conflicts or complications with the time frame of the ticket, please reach out to Mojtaba Personally or fill out [this form](#).

Requirements:

- Pages should be developed according to the Figma designs
- All functions and components should be present
- The code should be developed with respect to efficiency and optimization (balance between client/server-side rendering)

Goals:

- An accurate static design of the assigned pages should be developed, ready for hydration using APIs in the future.
